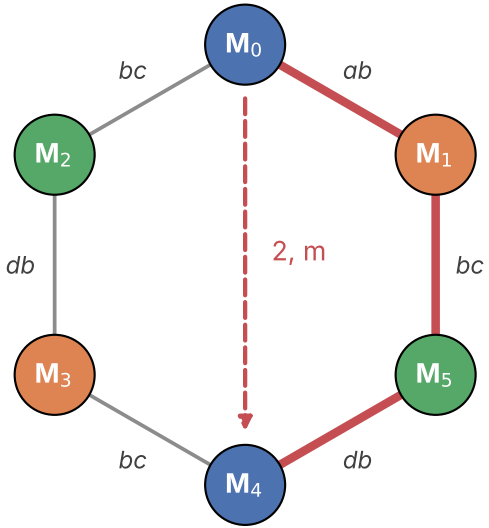
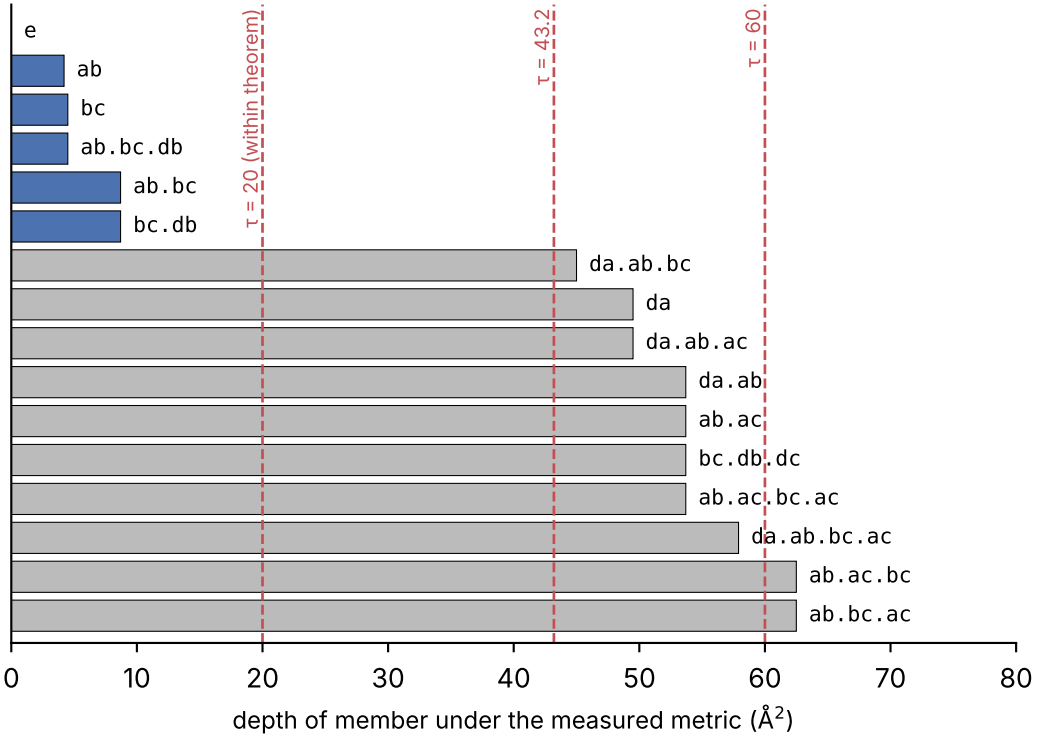
(a) the 100° cell: six members, flips at walls,
the twofold as the path $M_0 \to M_1 \to M_5 \to M_4$ plus a swap



shape (cell)

- 30, 40, 50 Å, β = 100°
- 30, 40, 53.7 Å, β = 113.4°
- 50, 40, 53.7 Å, β = 146.6°

(b) the 92° cell: sixteen members of the idealised closure,
the six of the ring (blue) and ten orthorhombic members entering at 45–62 Å²



PLACEHOLDER FIGURE — to be redrawn
